Department of Mathematics Seminar

Shifted geometric structures

By

Kadri İlker Berktav
(University of Zurich)

Abstract: In this talk, we outline a general framework for derived algebraic geometry and explain how to define familiar geometric structures in this context. As an important case, we discuss derived symplectic geometry and present some key results. With the same spirit, we also mention some of our work in this research direction.

Date: 11 July 2023, Tuesday
